

IMPORTANT

The InterActive 2000 HyTRON battery represents the latest in video battery technology. Nickel Metal Hydride (NiMH) is similar to NiCad batteries in most characteristics. However, NiMH has more sensitive charging and discharging parameters and requires a longer charge time for optimum performance. The charge time is approximately 3 hours.

Therefore, the HyTRON battery can only be charged, **with a softwarechip upgrade**, on the following chargers:

- QUAD Fast charger with serial number 8000 and higher

- MP4-D Logic Series charger with serial number 8000 and higher
 - Any LifeSaver DUAL charger
 - Any InterActive 2000 PowerCharger
 - Any XM 2002/2004 Charge Module
 - Any MP-2 charger
 - Any ABC-800 Charger

THE HYTRON 120 BATTERY WILL ONLY CHARGE ON ONE OF THE ABOVE MENTIONED CHARGERS WHICH HAS SOFTWARE REVISION 3.2 OR HIGHER
